Summary

Full-stack Software Engineering student at York University who ships live web apps that real people use and pay for. I work mostly in **Django REST Framework**, **FastAPI** and **PostgreSQL** on the backend and **React**, **Next.js** and **TypeScript** on the frontend, plus **Rust** and **AI/ML**. **AI agents** run my workflow: an orchestrator hands tasks to parallel **Claude Code subagents** in separate git worktrees, and a **remote control** setup with **MCP** tools lets me drive them and my machine from my phone. Outside of code I solve logic puzzles, play GeoGuessr, and play soccer and badminton.

Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, Rust, HTML/CSS
Databases: PostgreSQL, SQL, schema design, Alembic, SQLAlchemy, Django ORM
Web & APIs: React, Next.js, Django REST Framework, FastAPI, REST APIs, OAuth 2.0, JWT, WebSockets, Stripe
AI & ML: Anthropic SDK, tool-calling agents, multi-agent orchestration, MCP, SciPy, pandas, OR-Tools
Cloud & DevOps: Git, GitHub Actions CI/CD, Docker, AWS, Vercel, Railway, Linux | **Testing:** pytest, Vitest, Playwright
Spoken Languages: English (fluent), Turkish (fluent), Japanese (N4)

Education

York University, Bachelor of Engineering in Software Engineering *Expected Jan. 2028*
Coursework: Data Structures and Algorithms, Object-Oriented Programming (Java), Operating Systems, Database Systems

Projects

BundesPredict: Match Forecasting SaaS | *Django, PostgreSQL, Next.js, Stripe* Live | GitHub | Jun 2026 – Nov 2026

- Launched a subscription site with **paying subscribers**: free and **$5/month Pro** plans with daily chat quotas.
- Hand-wrote a **Dixon–Coles** model that scores **within 4%** of bookmaker closing odds over **1,827** backtested matches.
- Built an **LLM tool-calling agent** streamed over **SSE** whose odds changes are **server-clamped** to **±0.6 xG**.
- Granted Pro only from signed **Stripe webhooks** and built an admin dashboard for **MRR**, churn and AI cost per user.

z9bra: Daily Logic Puzzle | *Next.js, TypeScript, PostgreSQL, Python, OR-Tools* Live | GitHub | May 2026 – Aug 2026

- Shipped a Wordle-style daily logic puzzle that reached **200+ players** and a peak of **60 daily actives**.
- Wrote an open-source **CP-SAT** puzzle generator that proves every puzzle has **exactly one solution**.
- Cut the average 5x5 clue count from **~18 to ~16** by trying weak clue types first during removal.
- Synced streaks across devices with **Google OAuth** and **rate-limited** the public share-image API to **20/min per IP**.

OverTerm: Terminal for AI Coding Agents | *Rust, Tauri v2, TypeScript, GitHub Actions* GitHub | Aug 2026 – Oct 2026

- Built a native macOS terminal that shows whether each **AI coding agent** is busy, done or waiting on input.
- Fixed agents stuck as busy by hashing screen state, so **5/sec** idle cursor polls no longer reset the **400ms** idle timer.
- Released it with a **one-command install** and a tag-triggered pipeline that updates the **Homebrew** cask.
- Merged **7 pull requests from 2 other contributors** and root-caused a bug that sent every tab's replies to one tab.

Deximon: Pokémon TCG Platform | *Python, FastAPI, PostgreSQL, React, Docker* Live | GitHub | May 2026 – Jul 2026

- **Largest contributor on a 6-person team** (**66 of 140 commits**), merging through pull requests with **CI** on every PR.
- Built binder persistence end to end, from the UI through a **REST API** to a normalized schema with check constraints.
- **Reviewed 8 teammate PRs** and cut marketplace feed queries from **25 to 2 per page** by batching an **N+1** lookup.
- Fixed buyers' messages failing with a **500** whenever the seller had closed their tab, by dropping dead **WebSockets**.

Work Experience

Crew Member | *McDonald's* May 2022 – Dec 2022

- Picked up teammates' shifts on short notice and moved between front counter and kitchen wherever the team was short.
- Solved customer issues on the spot during peak rushes and coordinated with the kitchen to keep custom orders accurate.
